Helix

AI that operates for your business.

Private AI for your business, on your own computer.
Ask in plain words. Helix drafts; you send.

- Task-oriented
- Workflows
- Local automations
- Mobile handoff

See it working

THE PROBLEM

Give up your data, or give up your speed.

Helix removes the question.

Cloud AI

- ✓ Strong models
- ✗ Data leaves the business
- ✗ Tied to one vendor
- ✗ Mostly a chat window

Helix

Keep your data without giving up speed

No AI at all

- ✓ Data stays in
- ✗ Staff do it all by hand
- ✗ Excel holds the process
- ✗ Knowledge leaves with people

Most daily work is repetitive

Work is split across ERP, HR and finance tools

HOW IT WORKS

From plain words to business workflows

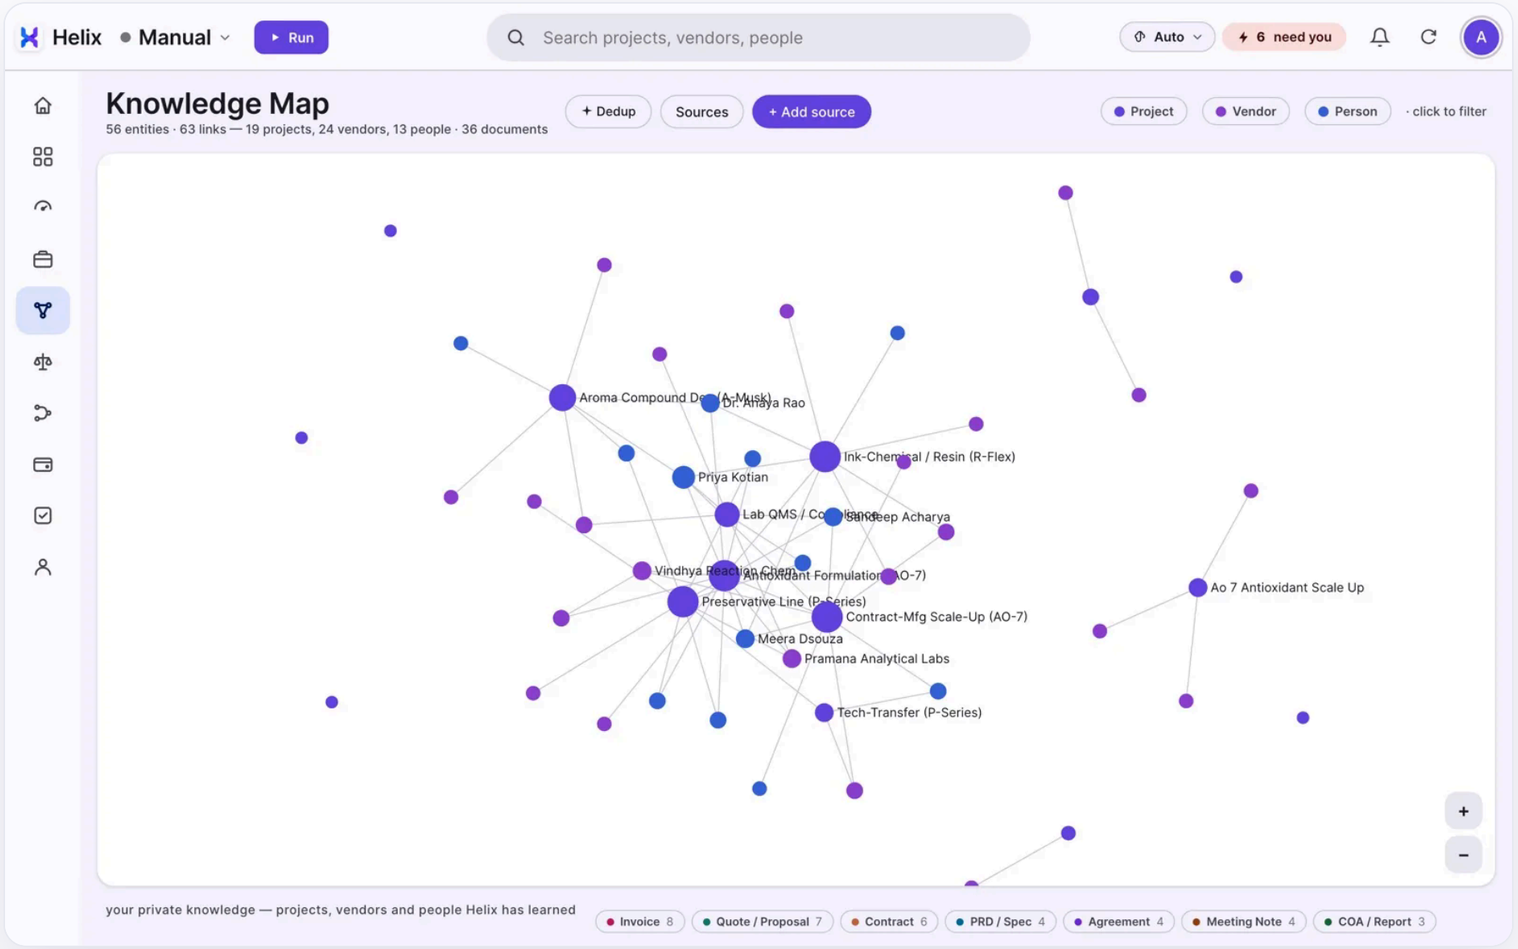

Install
Helix picks and installs local AI models that fit your machine.

Connect
A folder or your Microsoft account.

It maps
People, projects and vendors, within hours.

It acts
Action points, drafts and workflows.

It learns
Your writing style, from edits you approve.

The Knowledge Map Helix builds from your own information. Demo data.

WORKFLOWS Coming

One job, from request to payment.

Purchase request
Read from email or a file

RFQ drafted
Specs, quantity, dates

You approve
Human gate

Vendors scored
Past orders and rejections

Quotes compared
Cost and history

You approve
Human gate

PO issued
To the chosen vendor

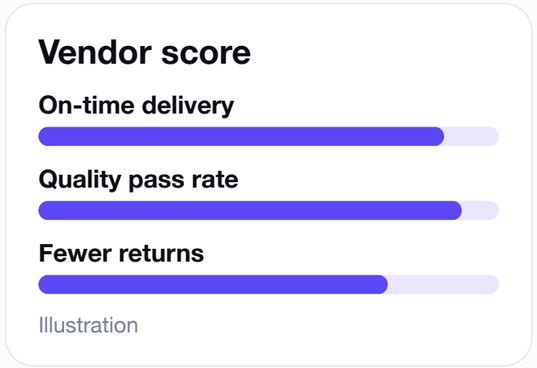

Vendor follow-ups
Drafted for you

Goods and QC
Accept or reject

Invoice to payment
Matched, then paid

Helix does You decide Example: procurement

Ready-made workflows, by role

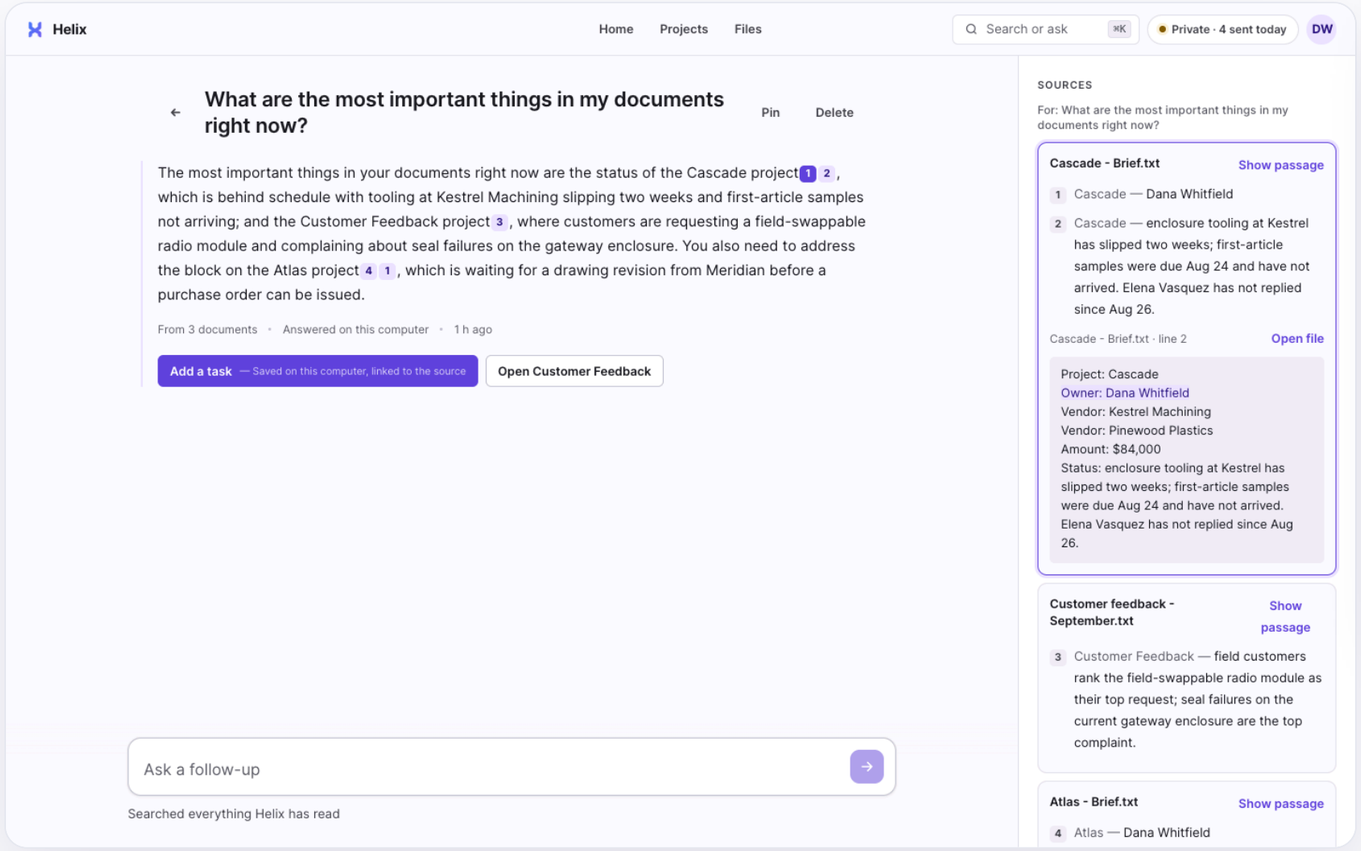

Talk to it to build your own

TASK-ORIENTED

An operator that does the job, beyond a chat window.

Your task → Answer with sources → Ready draft → You approve

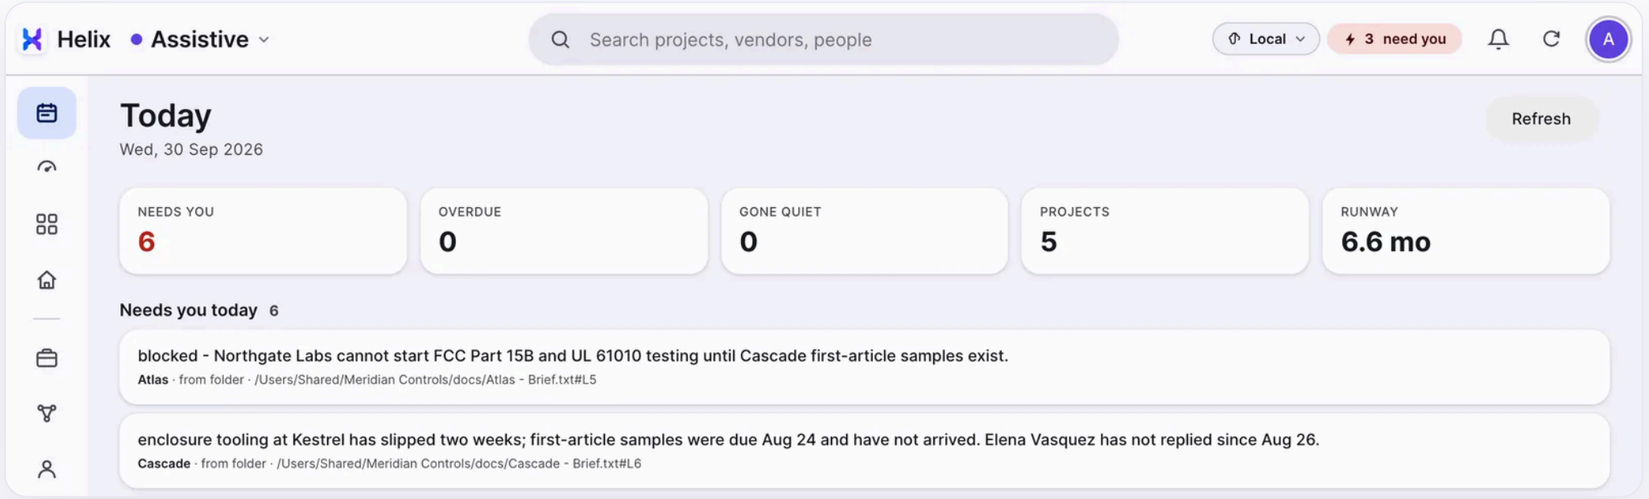

No source, no answer. Otherwise it says "I don't know"

Nothing sends until you approve

TODAY

Every morning, Helix shows what needs you.

Updates itself
from email and documents

Decisions counted
yours, and Helix's while you were away

Do now

Schedule

Delegate

LOCAL AUTOMATIONS

Everyday work runs on your own machine.

Calls
Call → Transcript → Summary → Tasks assigned

Email
New email → Linked to project → Draft reply → You approve

Expenses Coming
Receipt photo → Details read → Logged locally → Expense report

Repeat a task and it gets lighter

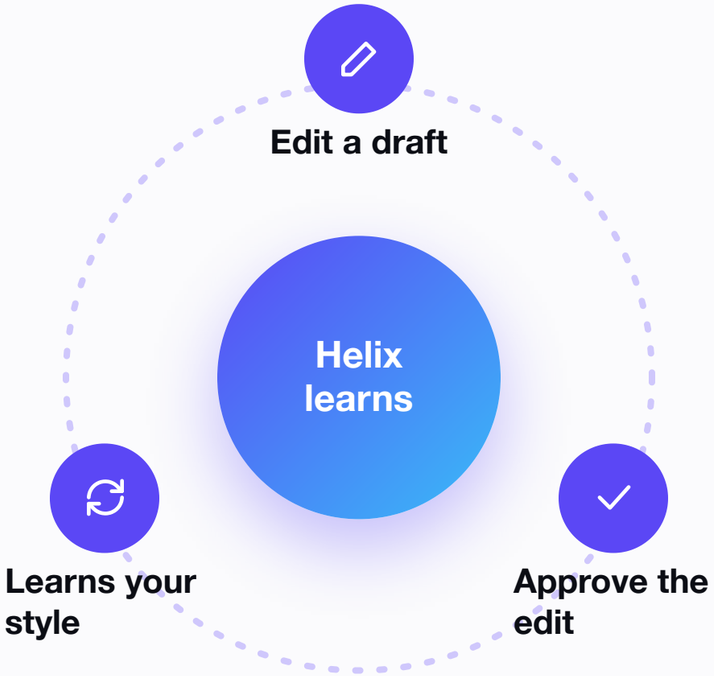

Machine effort per repeat. Illustration.

It works when your computer is free

Night: Helix works	You work: Helix waits	Coffee: works	You work: Helix waits	Evening: works

IT LEARNS Growing with each release

Helix learns style from edits you approve

Email stays email. Nobody changes how they work

What it learns stays on your computer

Writing style

Helix learns your writing style from edits you approve.

Style only

It never learns facts from those edits.

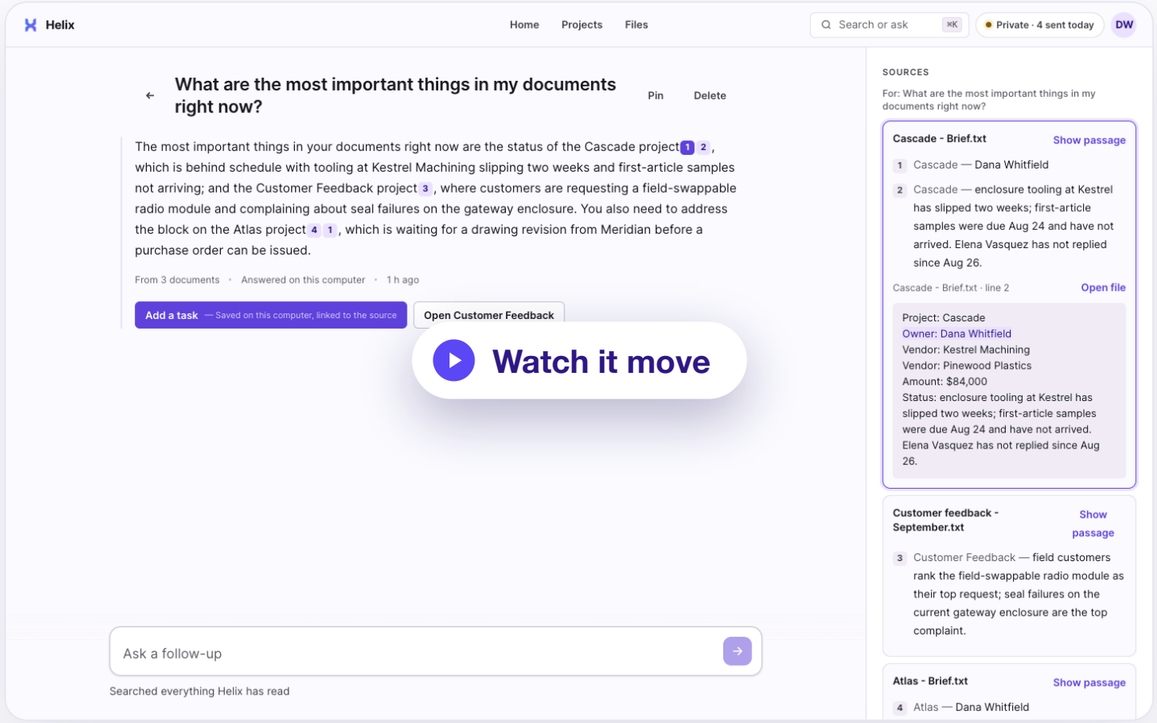

Your control

See and forget what it learned.

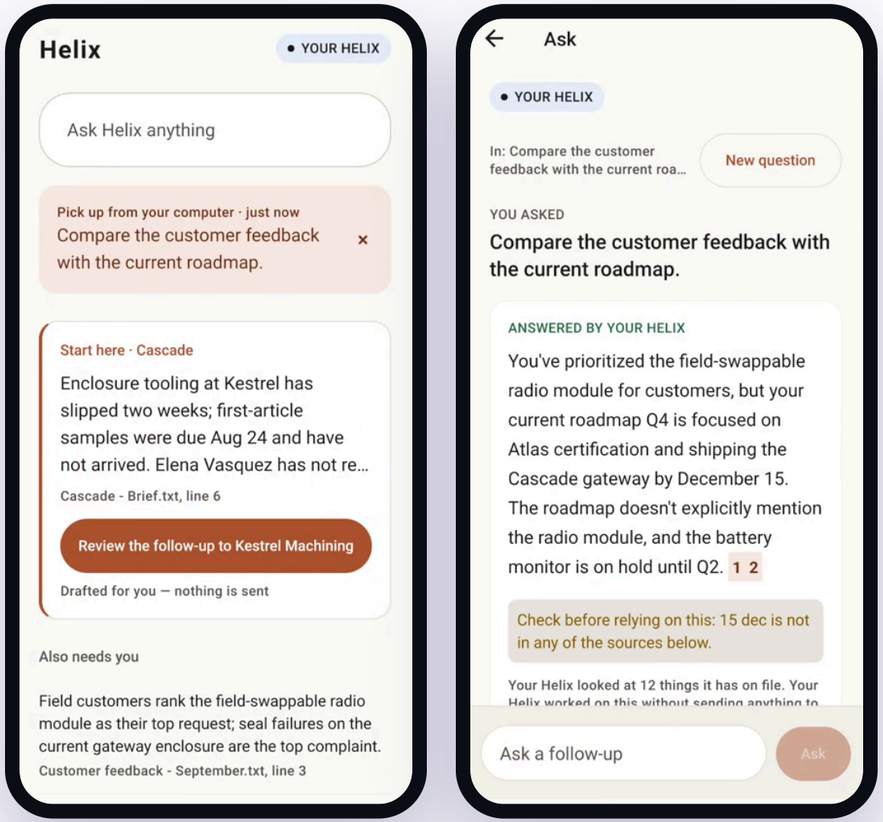

MOBILE HANDOFF Android test build

Start on your computer. Pick up on your phone.

Built for people on the road, like sales teams.

Private VPN between your devices

See it working: myhelixos.com/why →

CONTROL

You decide what leaves. Helix keeps the record.

Your task and data

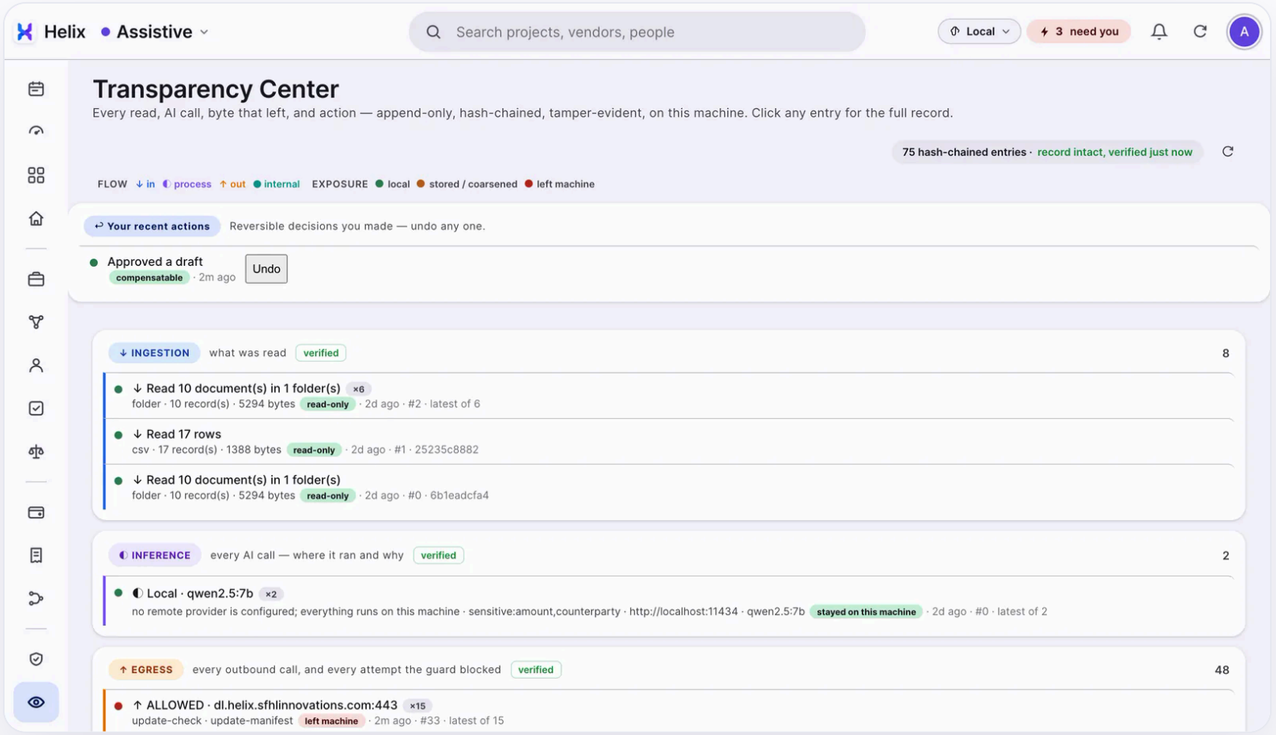

Company policy decides

Model on your machine by default

Claude, ChatGPT or Gemini on your own key

Your IT rules set the limits. We draft them if you have none.

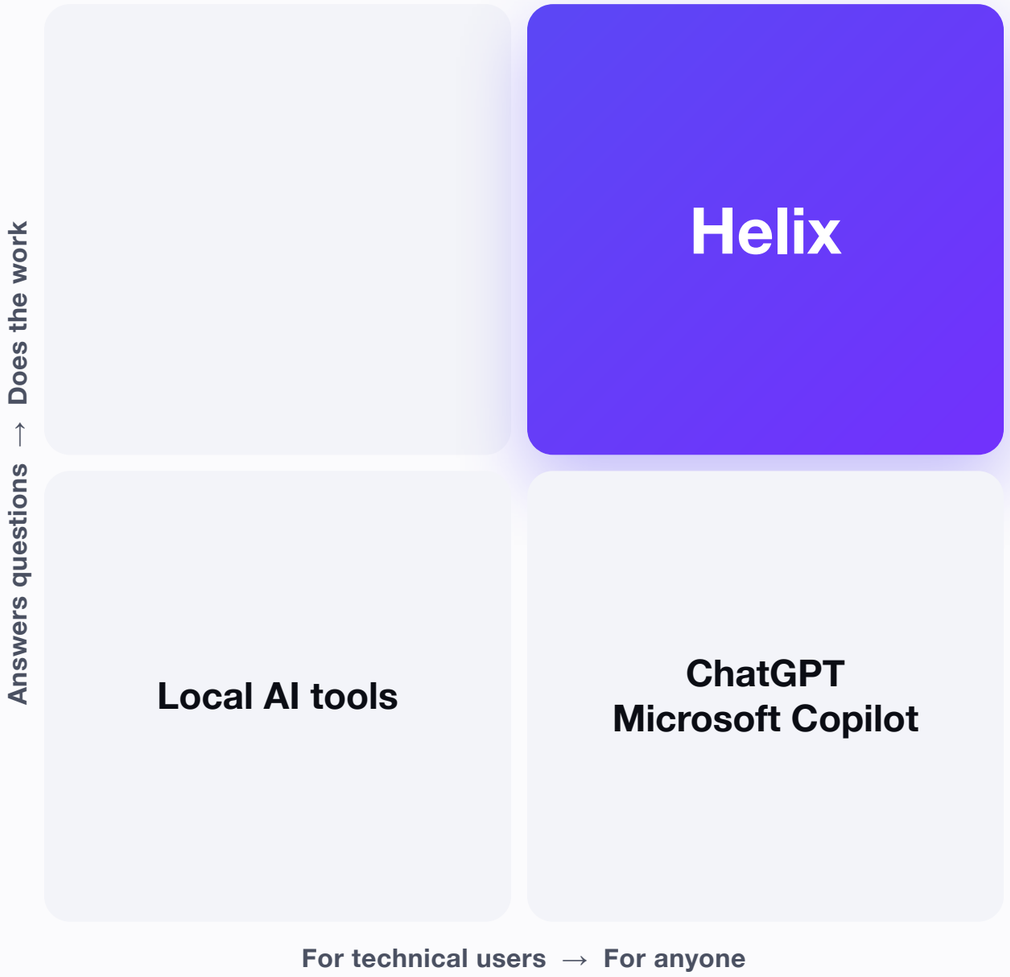

Every outside call is on the record

Transparency Center. Demo data.

WHERE IT FITS

For teams handling quotes, approvals and follow-ups

Regulated sectors first

- Pharma and healthcare
- Chemicals and manufacturing
- Financial services

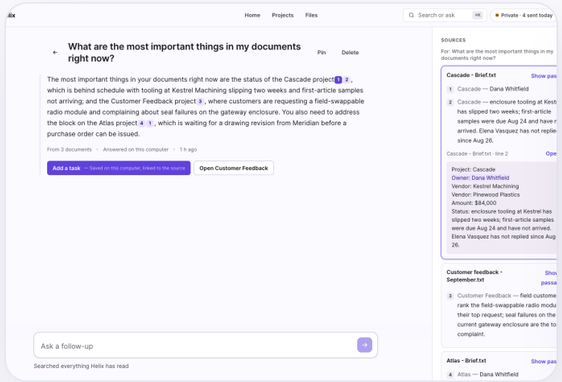

Finance · Operations · Procurement

Works with any AI provider · Runs on the computers you own

No usage tracking by design

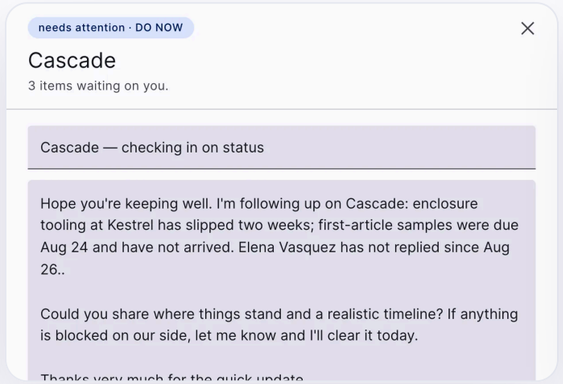

SEE IT WORKING
